

SOUTHWEST AIRLINES

737 Emergency Information

FOR YOUR SAFETY If an other-than-normal landing should occur, the airplane is equipped with the latest evacuation equipment. Below is a floor plan of the airplane you are in. Memorize the locations of all exits, especially the exits nearest you. Study how they are opened and operated. During an other-than-normal landing, pay close attention to instructions from the crew and follow these immediately. Do not go back for coats, purses, or other personal items.

EXIT LOCATIONS

(See Other Side)

5. Salga en este orden: pierna-cuerpo-pierna.
6. Deslicese por la parte de atras del ala.

HOW TO USE THE OXYGEN MASK COMO USAR LA MASCARA DE OXIGENO

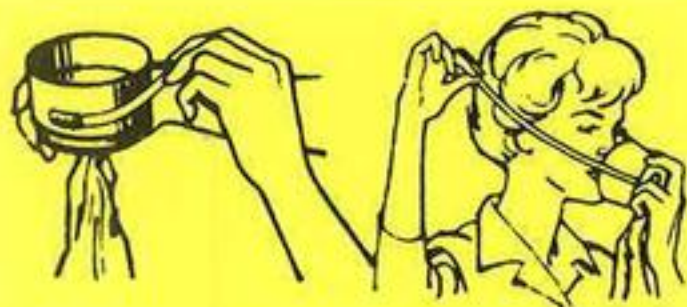

Jet aircraft fly at high altitude and the cabin is pressurized for your comfort. If cabin pressure ever was lost, you would be breathing high altitude "thin air" . . . so it is imperative that cigars and cigarettes be extinguished immediately and oxygen masks be put on as shown below.

1. WHERE TO LOCATE MASKS — Oxygen masks are located in overhead compartments. If cabin pressure is lost, doors open automatically and masks drop out. Promptly place mask over nose and mouth as follows:

1. Las máscaras de oxígeno caen automáticamente.

2. GRIP MASK FIRMLY AND PULL — Take nearest mask in hand and pull toward you. This turns on oxygen and releases oxygen supply tube. Relax comfortably in seat with mask in place.

2. Estire hacia ud. La máscara más próxima.

3. REMOVE ELASTIC BAND AROUND MASK — Slip elastic band from around mask. Hold mask over nose and mouth. Slip band over head, this holds mask in position.

3. Mantenga la máscara sobre su boca y nariz ponga la banda elástica alrededor de su cabeza.

ABOUT YOUR SEAT BELT: Please keep it fastened whenever the seat belt sign is lighted. You may walk about the cabin when the sign is off; however, you will notice most experienced air travelers keep their belts loosely fastened whenever they are seated. We recommend this practice.

To Fasten:
Push together
Para
abrochar:
Inserte una
parte de la
hebilla
dentro
de la otra

To Release:
Lift up on
the top of
the buckle.
El cinturón
se suelta
levantando
la topa de
la hebilla

BRACING POSITION POSICION PARA SOPORTE

Bottom Seat Cushion is Flotable.
Grasp at Back and Pull from Seat Frame

PORTABLE ELECTRONIC DEVICES

Are you carrying a portable radio or recorder? Federal Aviation Administration (FAA) regulation prohibits the operation in-flight of certain portable electronic devices since they can interfere with the aircraft's navigation system. Please check with the stewardess before operating your radio, dictating machine or recorder.

PLEASE DO NOT REMOVE THIS CARD FROM AIRPLANE.
